

To whom it may concern: I object to the NAB's petition 04-160 that attempts to block traffic and weather service from being provided to the public via satellite radio. Traffic and weather service should be available to consumers in any format possible, not just providers of the past. I understand that BIG RADIO is feeling the pinch of competition from satellite radio, otherwise I wouldn't be hearing negative ads broadcast on FM about satellite radio. Satellite radio is the future and I don't think that anyone can stop it, although the NAB is trying its hardest. Please reject NAB's petition 04-160.

Thanks.
